Messify Platform User Guide

Automated Multi-Tenant Mess Management Ecosystem

Document Target: General Mess Members & Workspace Managers

Welcome to **Messify**, your all-in-one multi-tenant SaaS platform built to automate meal tracking, grocery budgeting, and monthly financial settlements for shared dining systems. Whether you are a standard **Member** logging your daily meals or a **Manager** auditing expenses and closing out the month, this guide will walk you through exactly how the system works.

1. Getting Started & Logging In

Messify operates using isolated workspaces called **Tenants**. Your mess will have its own custom web address configured by your manager.

1. Navigate to your mess's unique workspace URL (e.g., `https://pioneermess.messify.com`).
2. Enter your registered email address and secure password on the login screen.
3. Upon successful authentication, the system reads your account permission tier and redirects you to either the **Member Dashboard** or the administrative **Manager Dashboard**.

2. The Member Guide

As a standard member, your primary responsibilities are tracking your personal meal footprints, submitting your out-of-pocket grocery purchases, and checking your live financial standing.

2.1. Viewing Personal Meal Logs

On your main dashboard, you can see a real-time summary of your total meals consumed during the active calendar month. Meals can be recorded in fractions to allow for half-meals (e.g., Breakfast = `0.5`, Lunch = `1.0`, Dinner = `1.0`). Verify that your daily history matches your actual consumption. If you notice an error, contact your mess Manager to update it.

2.2. Adding Grocery (Bazar) Expenses

When it is your turn to buy groceries for the house, you must log your transaction in the system to ensure you receive proper financial credit:

- Click on the **Add Grocery Expense** button.
- Enter the exact **Amount** spent in Taka (Tk).

- Provide a brief description of what you bought (e.g., *"Rice, oil, onions, and chicken"*).
- Select the purchase date and click **Submit**.

Your expense will enter a `PENDING` state. It will not be added to the official mess calculations until your Manager reviews and verifies the purchase.

2.3. Reading the Grocery Ranking Matrix

The system features a live **Grocery Contribution Ranking** table. This tool ranks all mess members in **ascending order** based on the total money they have spent on verified groceries.

- **Who is at the top?** The members who have spent the *least* amount of money appear at the very top of the list.
- **Why does this matter?** The ranking gives the group clear visibility into who needs to step up and take responsibility for the next grocery run to keep contributions completely fair.

3. The Manager Guide

In addition to standard member features, Managers hold administrative privileges to oversee the mess, approve ledger items, log cash injections, and execute final financial closures.

3.1. Verifying Grocery Expenses

To prevent fraud or entry errors, all member-submitted grocery logs require your explicit approval. Navigate to the **Manager Action Center** and open the **Pending Expenses** queue. Cross-reference the submitted text and amount against the physical store receipt, then click **Verify** to approve the transaction. The system immediately shifts its status to `VERIFIED` and adds the amount to the common monthly pool.

3.2. Managing and Bulk-Logging Meals

While members can view their histories, Managers have the authority to input and adjust meal numbers for the entire group. Use the **Bulk Meal Matrix** grid to log meals for all members simultaneously at the end of each day or week. Simply type the meal counts into the user rows under the corresponding calendar date and click **Save**.

3.3. Logging Member Deposits

When members hand over cash or send advance mobile banking transfers to fund the kitchen, you must log these injections. Go to the **Deposits Ledger** panel, select the member's name, input the exact deposit amount (e.g., `3,000 Tk`), and save the record.

4. The Month-End Settlement Process (How it Works)

At the end of the billing cycle, the Manager clicks **Close Month**. The system automatically runs a highly precise arithmetic engine to settle the books. Here is the step-by-step math the system handles behind the scenes:

Step 1: Calculating the Universal Meal Rate

The system adds up all verified grocery expenses and divides that number by the total number of meals consumed by everyone combined:

$$\textit{Meal Rate} = \textit{Total Verified Expenses} / \textit{Total Meals Consumed}$$

Example: If total expenses equal **30,000 Tk** and total combined meals equal **1,000**, the system sets the **Meal Rate at 30 Tk per meal**.

Step 2: Calculating Individual Cost Liabilities

The system calculates exactly how much money each individual user consumed out of the common pool based on physical footprint:

$$\textit{Member Cost} = \textit{Personal Meal Count} \times \textit{Calculated Meal Rate}$$

Step 3: Generating the Final Net Balance

Finally, the platform subtracts the member's total cost liability from the upfront deposits they made during the month:

$$\textit{Final Balance} = \textit{Total Deposits} - \textit{Member Cost}$$

- **Surplus Balance (Green Icon):** If the result is a positive number, the member has remaining credit to be refunded or rolled forward to jumpstart the next month.
- **Due Deficit (Red Alert):** If the result is a negative number, the member owes this exact amount to the mess fund and must pay it immediately to balance the ledger.

5. Frequently Asked Questions (FAQ)

Q: Can I edit a grocery expense after submitting it?

A: Members can edit or delete an expense only while it is still `PENDING`. Once a Manager shifts it to `VERIFIED`, it becomes locked. If an adjustment is needed after verification, ask a Manager to manually alter the entry.

Q: Why hasn't my grocery purchase updated my ranking position?

A: The ranking matrix only calculates Verified expenses. Ensure your Manager has reviewed and approved your submission.

Q: Can the system support partial meals?

A: Yes. The system allows numerical decimal entries (such as `0.5` or `1.5`) to accommodate members who only eat specific meals in a day.
